SOLUTION_

- One login, everywhere — Authenticate once through a single "front door" and gain access to all connected apps
- Simplified user management — Add, remove, or enforce security policies (like 2FA) in one place
- This "front door" is called an Identity Provider (IdP) — think of it as a bouncer: your apps trust that if the IdP let you in, you're supposed to be there
- Apps communicate with the IdP using standard protocols (OAuth 2.0, SAML, LDAP) — if a self-hosted app supports external login, it almost certainly works with Authentik

AUTHENTIK FEATURES_

01 SINGLE SIGN-ON

02 USER AND GROUP MANAGEMENT

03 AUDIT LOGS

04 PROXY ACCESS

05 MULTI-FACTOR AUTHENTICATION

DEMO_

WHO IS IT FOR?_

SOLO HOME LABBERS

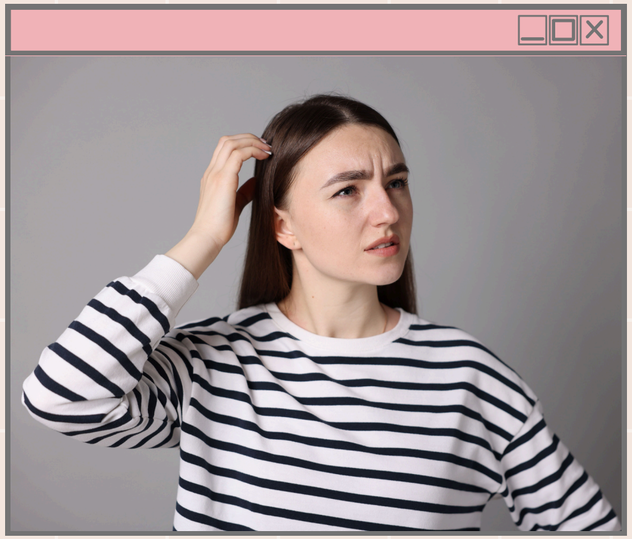
You've got services running, you want one login for all of them, and you want to be able to grant and revoke access without fuss.

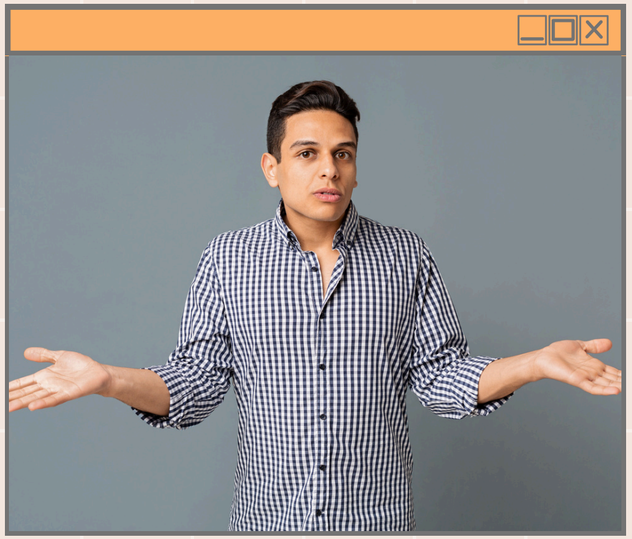
HOUSEHOLDS OR SMALL GROUPS

Giving family members or a friend group selective access to shared self-hosted services. One place to update when someone needs to update a password.

SMALL TEAMS OR SMBS

You want proper access management without paying for an enterprise identity platform. Authentik gives you that infrastructure on your own terms.





THAT SEEMS OVERKILL_

POCKET ID_

- Pocket ID is a simple OIDC provider that allows users to authenticate with their passkeys to your services.
- Designed to be simpler and easier to use
- User management
- Is passwordless the future?

DEMO_

AUTHENTIK_

- Supports a wide range of protocols and forward authentication
- Highly customisable login flows
- Detailed audit logs and user/group management
- Steeper learning curve and more initial config
- Heavier resource usage

POCKET ID_

- Extremely fast to set up
- Modern passkey-first approach
- Simple but intuitive approach to users and groups
- No conditional flows or complex access logic
- Audit logging is basic compared to Authentik
- Limited protocol support

TLDR; HOW THINGS GOT EASIER_

- One log in to manage for each user
- SSO with Google, Discord, Github...
- Logs and stats all in one place
- Flexible rules mean I can be as laid back or as paranoid as I need to be
- Good docs and growing OIDC support make adding new services a dream.

THANK YOU!
